

## Pore-deep maintenance and basic cleaner for fine stoneware and ceramic flooring

### Area of application

FOREX is suitable for all waterproof and alkali-resistant floorings, particularly ceramic tiles and alkali-resistant stone floors. For manual and mechanical cleaning.

### Application

#### Mechanical basic cleaning

Dilute 10–15 % FOREX with cold, fresh water (1 part FOREX to 9 parts water). Pre-rinse floor including grouting with plenty of cold, fresh water. Apply plenty of cleaning solution to the floor (500–650 ml application solution/m<sup>2</sup>). Exposure time approx. 5 minutes. During the exposure time, manually or mechanically keep moving the dirt. After the exposure time has passed, completely go over the flooring using a single-disc machine and suitable pad/brush, thoroughly vacuuming the treated floor. Thoroughly mop the floor (multiple times if required) with fresh water and vacuum. Remove loosened residue from the floor by wiping with fresh water – if required, wash the flooring and go over with a water extractor.

#### Maintenance cleaning

Apply 0.25–5.0 % of FOREX application solution. Clean manually or using a scrubbing machine in a 2-stage wet wiping method.

### Product characteristics

- RK-listed
- Removes stubborn dirt after a short exposure time
- For daily maintenance cleaning and basic cleaning
- Particularly suitable for rough and microporous stoneware tiles
- Low-foaming

### Note

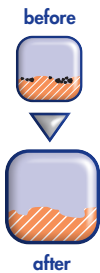

Test material compatibility on an inconspicuous area prior to use. Risk of slipping! Thoroughly pre-soak grouting with cold, fresh water.
